

## 实验 1.5

### 一、运行结果

### 二、代码说明

#### 1. 创建函数 IsH()

```
Function IsH(ss As String) As Boolean
    Dim i%, Ls%
    IsH = True
    ss = Trim(ss)
    Ls = Len(ss)
    For i = 1 To Ls \ 2
        If Mid(ss, i, 1) <> Mid(ss, Ls + 1 - i, 1) Then
            IsH = False
            Exit Function
        End If
    Next i
End Function
```

#### 2. 实现 Textbox2 填充

```
Private Sub TextBox1_LostFocus(sender As Object, e As EventArgs) Handles
    TextBox1.LostFocus
        Dim a As String
        If IsH(TextBox1.Text) Then
            a = " ★ "
        Else
            a = " "
        End If
        TextBox2.Text &= vbCrLf & TextBox1.Text & a
        TextBox1.Text = " "
```

End Sub
